

## **Explosive Minds! Audio-Visual Requirements**

### **STANDARD SHOW AND TRAINING**

These specifications are given as a guide to help you plan your event, and they will vary depending on your selected product and your audience size. Explosive Minds make these recommendations so you get the most from their performance.

A raised clear performance stage large enough for five (5) people to spread out comfortably. Explosive Minds! will not perform to a standing audience. If the audience are seated at tables during the event, all table service is to stop for the duration of the Explosive Minds performance. Explosive Minds also do not perform whilst audiences are eating... laughing and eating cheesecake doesn't mix!

With an audience of 50 or more please provide three (3) Cordless Headset Microphones and two (2) handheld radio microphones on boom stands. For an audience with less than 50, only two (2) radio microphones on boom stands will be required. A technician in attendance with a working knowledge of the AV System is required.

A CD player (that will read a CD-R) that is run through the same AV system as the microphones and is located in a position where the operator can clearly see the performance. Explosive Minds do not use DVD players.

Explosive Minds! work with as much light as possible. If a stage wash cannot be provided, please arrange three (3) narrow spots at stage right, front centre and stage left.

### **ADDITIONAL EQUIPMENT REQUIREMENTS - Musical Show**

In order to run a keyboard through the sound system Explosive Minds requires enough power cable to run from the keyboard to the nearest power point (this could easily be 5-10m from the stage in some venues).

A short 1-2m cable with a JACK input at one end and either a JACK or RCA input at the other (depending on keyboard being used).

A DI Box (either be powered by batteries or down a line from the sound desk) to route the keyboard's audio output through the sound system.

Adequate mic cable to run from the DI Box to the sound desk, as many venues will not have patch outlets located near the stage. Adequate tape to secure the power cable and mic line for safety purposes.

An additional headset microphone - taking the total required to four.

## **E=MC2**

Staging requirements as above, suitable for two people. Two wireless headphone microphones and two hand held microphones. A CD player (that will read a CD-R) that is run through the same AV system as the microphones and is located in a position where the operator can clearly see the performance. Explosive Minds do not use DVD players.

Explosive Minds! work with as much light as possible. If a stage wash cannot be provided, please arrange three (3) narrow spots at stage right, front centre and stage left.
