

MIKE WALSH AV REQUIREMENTS

Mike's presentations use a heavy amount of images and video, this means he runs each presentation from his own laptop which has been specifically configured for the task. If you can please make the following available that would be most appreciated:

- A digital data projector and a 3.5mm sound lead.
- If the AV control deck is at the back of the room, the positioning of the laptop cable must be near the stage, so that Mike's wireless controller is within range.
- A fold back screen (a fold back screen is just a monitor pointed back at the speaker so that I can walk around and see which slide is active without having to look back at the main monitor.)
- A wireless lapel or headset microphone
- A bottle of water.
